1. Introduction of Megarac SP

Megarac SP allows remote access of computers with BMC (Baseboard Management Controllers) and IPMI (Intelligence Platform Management Interface). System administrators may easily monitor system health or manage computer events of remote computers via the web based Megarac SP GUI using standard Internet browsers.

2. Megarac SP GUI Overview

2.1 Login page

A login form with a light blue background. It contains two input fields: 'Username:' with the text 'admin' and 'Password:' with masked characters '*****'. Below the password field is a link that says 'Forgot Password?'. At the bottom of the form is a 'Login' button.

Language: English ▼

Required Browser Settings

1. Allow popups from this site ✓
2. Allow file download from this site. (How to ?)
3. Enable javascript for this site ✓
4. Enable cookies for this site ✓

It is recommended not to use Refresh, Back and Forward options of the browser.

The default username and password are both “admin”. It is recommended to change the username and password after your first login.

2.2 Dashboard

The dashboard displays overall information about the status of the device.

Device Information

Displays the Firmware Revision and Firmware Build Time (Date and Time).

Network Information

Shows network settings for the device. Click on the link Edit to view the Network Settings Page.

Remote Control

Start remote redirection of the host by launching the console from this page. Clicking on the 'Launch' button of the 'Remote Control' will cause the jviewer.jnlp file to be downloaded. Once the file is downloaded and launched, a Java redirection window will be displayed.

Remote Console Preview Box

It will show the console preview of the remote server by using a java application. Click on the 'Refresh' button to reload the console preview.

Sensor Monitoring

It lists all available sensors on the device, with information such as status,

name, reading, and status icon, as well as a link to that sensor's page.

There are 3 possible states for a Sensor:

- Green dot denotes a Normal state.
- Yellow exclamation mark denotes a Warning state.
- Red x denotes a Critical state.

The magnifying glass allows access to the Sensor details page for that sensor.

Event Logs

A graphical representation of all events incurred by the various sensors and %occupied/available space in logs. If you click on the color-coded rectangle in the Legend for the chart, you can view a list of those specific events only.

2.3 Field Replaceable Unit (FRU)

ASRock Rack American Megatrends

Dashboard FRU Information Server Health Configuration Remote Control Auto Video Recording Maintenance Firmware Update HELP

Field Replaceable Unit(FRU)

This page gives detailed information for the various FRU devices present in this system.

Basic Information:

Clear All Event Logs

This page displays the list of events incurred by different sensors on this device. Double click on a record to see the details of that entry. You can also sort the list of entries by clicking on any of the column headers. You can use the sensor type or sensor name filter options to view those specific events logged in the device.

BMC Timezone

Check this option to display the event log entries logged with the BMC Timezone value.

Client Timezone

Check this option to display the event log entries logged with the Client (user's) Timezone value.

UTC Offset

Displays the current UTC Offset value based on which event Time Stamps will be updated. Navigational arrows can be used to selectively access different pages of the Event Log.

Clear All Event Logs

Clear All Event Logs option will delete all existing records for all sensors.

2.4.3 System and Audit Log

The screenshot shows the ASRock Rack American Megatrends System & Audit Logs interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The main content area is titled 'System & Audit Logs' and includes a note: 'This page displays logs of system and audit events for this device (if the options have been configured)'. Below this, there are two tabs: 'System Log' (selected) and 'Audit Log'. A filter dropdown is set to 'Alert'. The table displays two log entries:

Event ID	Time Stamp	HostName	Description
1	Mar 3 03:16:48	AMIBC5FF4E9FFEF	kernel: Helper Module Driver Version 1.2
2	Mar 3 03:16:48	AMIBC5FF4E9FFEF	kernel: Copyright (c) 2006 American Megatrends Inc.

UTC Offset: (GMT+/-0) This Filter: 2 event entries

If configured, these logs will display all the system and audit events that occurred on this device.

NOTE: Logs have to be configured under 'Configuration -> System and Audit Log' in order to display entries.

System Log

Click the System Log tab to view all system events. Entries can be filtered based on their classification levels.

Audit Log

Click the Audit Log tab to view all audit events for this device.

2.5 Configuration

2.5.1 Active Directory Settings

The 'Active Directory Settings' page displays the current configuration of role groups. It includes a table with columns for Role Group ID, Group Name, Group Domain, and Group Privilege. The table shows 5 slots, with the first 4 containing role groups and the 5th slot being empty. The status message indicates that the 'Active Directory' is currently disabled and provides instructions on how to enable it and manage role groups.

Role Group ID	Group Name	Group Domain	Group Privilege
1	~	~	~
2	~	~	~
3	~	~	~
4	~	~	~
5	~	~	~

The displayed table shows current configured Role Groups and the available slots. You can modify, add or delete role groups from here. Group domain can be the AD domain or a trusted domain. Group Name should correspond to the name of an actual AD group. To view the page, you must be at least a User. To modify or add a group, you must be an Administrator.

NOTE: Free slots are denoted by “~” in all columns for the slot.

Advanced Settings

Click this option to configure the Active Directory Settings. Options are Enable Active Directory Authentication, User Domain name, Time Out and up to three Domain Controller Server Addresses.

Add Role Group

Select a free slot and click 'Add Role Group' to add a new role group to the device. Alternatively, double click on a free slot to add a role group.

Modify Role Group

Select a configured slot and click 'Modify Role Group' to modify that role group. Alternatively, double click on the configured slot.

Delete Role Group

Select the desired role group to be deleted and click 'Delete Role Group'.

2.5.2 DNS Server Settings

ASRock Rack American Megatrends

Save Reset

This page is used to configure the Host name and Domain Name Server configuration of the device.

Host configuration

Host Settings

Choose either Automatic or Manual settings.

Host Name

It displays the hostname of the device if Auto is selected. If the Host setting is chosen as Manual, then specify the hostname of the device.

Register BMC

Choose the BMC's network port to register with the DNS settings. Check the option 'Register BMC' to register with the DNS settings. Choose the option 'Direct Dynamic DNS' to register with direct dynamic DNS or choose 'DHCP Client FQDN' to register through a DHCP server.

Domain Name Configuration

Domain Settings

It lists the options for the domain interface as Manual, v4 or v6 for multi LAN channels.

Domain Name

It displays the domain name of the device if Auto is selected. If the Domain setting is chosen as Manual, then specify the domain name of the device.

Domain Name Server Configuration

DNS Server Settings

It lists the options for the DNS interface, Manual and available LAN interfaces.

IP Priority

If the IP Priority is IPv4, it will have 2 IPv4 DNS servers and 1 IPv6 DNS server. If the IP Priority is IPv6, it will have 2 IPv6 DNS servers and 1 IPv4 DNS server.

NOTE: This is not applicable for Manual configuration.

DNS Server 1, 2 & 3

Specify the DNS (Domain Name System) server address to be configured for the BMC.

- An IPv4 Address is made of 4 numbers separated by dots as in "xxx.xxx.xxx.xxx".
- Each number ranges from 0 to 255.
- The first number must not be 0.

DNS Server Address will support the following:

- IPv4 Address format.
- IPv6 Address format.

Save

Click 'Save' to save any changes made. You will be logged out of current UI session and will need to log back in.

Reset

Reset the modified changes.

2.5.3 System Event Log

The screenshot shows the ASRock Rack web interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The 'Configuration' tab is selected. The page title is 'System Event Log'. Below the title, a message states: 'This page is used to configure the System Event log information.' The current setting is 'Current Event Log Policy : LINER'. There are two radio button options: 'Enable Linear Event Log Policy' (which is selected) and 'Enable Circular Event Log Policy'. At the bottom right, there are 'Save' and 'Reset' buttons.

This page is used to configure the System Event log information.

Current Event Log Policy

It will display the configured Event Log Policy.

Linear Event Log Policy

Check this option to enable the Linear System Event Log Policy for the Event Log.

Circular Event Log Policy

Check this option to enable the Circular System Event Log Policy for the Event Log.

Save

Click 'Save' to save the configured settings.

Reset

Click 'Reset' to reset the modified changes.

2.5.4 Images Redirection

ASRock Rack American Megatrends

Dashboard FRU Information Server Health Configuration Remote Control Auto Video Recording Maintenance Firmware Update HELP

Images Redirection

Remote Media is used to mount the images from remote system and perform redirection. Remote Media is currently disabled. To configure Remote Media Settings: Click on 'Advanced Settings' button. [Advanced Settings](#)

Number of available Images: 0

#	Image Type	Image Name	Redirection Status
1	Floppy	~	~
2	CD/DVD	~	~
3	Harddisk	~	~

[Start Redirection](#) [Add Image](#) [Replace Image](#) [Delete Image](#)

The displayed table shows configured images on BMC. You can add or replace the images from here to the remote media. Only one image can be configured for each image type. To configure the image, You need to enable Remote Media support using 'Advanced Settings'. To add or replace an image, you must have Administrator Privileges.

NOTE: Free slots are denoted by "~".

Start/Stop Redirection

Select a configured slot and click 'Start Redirection' to start the remote media redirection. It is a toggle button, if the image is successfully redirected, then click the 'Stop Redirection' button to stop the remote media redirection.

Add Image

Select a free slot and click 'Add Image' to configure a new image to the device. Alternatively, double click on a free slot to add an image.

Replace Image

Select a configured slot and click 'Replace Image' to replace the existing image. Alternatively, double click on the configured slot.

Delete Image

Select the desired image to be deleted and click 'Delete Image'.

NOTE: Redirection needs to be stopped to replace or delete the image.

2.5.5 LDAP/E-Directory Settings

LDAP/E-Directory Settings

LDAP/E-Directory is currently disabled. To enable LDAP/E-Directory and configure its settings, Click on 'Advanced Settings' button.

The list below shows the current list of configured Role Groups. If you would like to delete or modify a role group, select the name in the list and press Delete Role Group or Modify Role Group. To add a new Role Group, select an unconfigured slot and press Add Role Group.

Number of configured Role groups: 0

Role Group ID	Group Name	Group Search Base	Group Privilege
1	~	~	~
2	~	~	~
3	~	~	~
4	~	~	~
5	~	~	~

Add Role Group Modify Role Group Delete Role Group

The displayed table shows the configured Role Groups and available slots. You can modify or add/delete role groups from here. The Group Search Base can be any path from where a Group is located to the Base DN. The Group Name should correspond to the name of an actual LDAP/E-Directory group. To view the page, the user must at least be a User. To modify or add a group, the user must be an Administrator.

NOTE: Free slots are denoted by “~” in all columns for the slot.

Advanced Settings

Click this option to configure LDAP/E-Directory Advanced Settings. Options are Enable LDAP/E-Directory Authentication, IP Address, Port, Bind DN, Password and Search base.

Add Role Group

Select a free slot and click 'Add Role Group' to add a new role group to the device. Alternatively, double click on a free slot to add a role group.

Modify Role Group

Select a configured slot and click 'Modify Role Group' to modify that role group. Alternatively, double click on the configured slot.

Delete Role Group

Select the desired role group to be deleted and click 'Delete Role Group'.

2.5.6 Mouse Mode Settings

The screenshot shows the ASRock Rack American Megatrends BIOS interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The user is logged in as 'admin (Administrator)'. The 'Configuration' tab is selected, and the 'Mouse Mode Settings' page is displayed. The page indicates that redirection console mouse mode settings can be modified here. The current mouse mode is set to 'ABSOLUTE'. Three radio button options are available: 'Set Mode to Relative (Recommended when server OS is Linux)', 'Set Mode to Absolute (Recommended when server OS is Windows)', and 'Set Mode to Other Mode (Recommended for SLES-11 OS Installation)'. At the bottom right, there are 'Save' and 'Reset' buttons.

ASRock Rack American Megatrends

admin (Administrator) Refresh Print Logout

Dashboard FRU Information Server Health Configuration Remote Control Auto Video Recording Maintenance Firmware Update HELP

Mouse Mode Settings

Redirection console mouse mode settings can be modified here.

Current Mouse Mode : ABSOLUTE

- ☐ Set Mode to Relative (Recommended when server OS is Linux)
- ☐ Set Mode to Absolute (Recommended when server OS is Windows)
- ☐ Set Mode to Other Mode (Recommended for SLES-11 OS Installation)

Save Reset

The Redirection Console handles mouse emulation from the local window to the remote screen using either of the two methods. Only 'Administrator' has the right to configure these options.

- Relative Mouse mode
- Absolute Mouse mode
- Other Mouse mode

Relative Mouse mode

The Relative mode sends the calculated relative mouse position displacement to the server. To select this mode select the "Set mode to Relative" option.

Absolute Mouse mode

The absolute position of the local mouse is sent to the server. To select this mode select the "Set mode to Absolute" option.

Other Mouse mode

Select Other Mode to have the calculated displacement from the local mouse in the centre position, sent to the server. Use this mode for SLES 11 Linux OS installation.

Save

Click 'Save' to save any changes made.

Reset

Click 'Reset' to reset the modified changes.

2.5.7 Network Settings

The screenshot shows the 'Network Settings' page in the ASRock Rack American Megatrends BIOS/UEFI. The page is divided into several sections for configuring network settings.

Manage network settings of the device:

- LAN Interface:** A dropdown menu showing 'bond0'.
- LAN Settings:** A checkbox labeled 'Enable' which is checked.
- MAC Address:** A text field displaying 'BC:5F:F4:E9:FF:EF'.

IPv4 Configuration:

- Obtain an IP address automatically:** A checkbox labeled 'Use DHCP' which is checked.
- IPv4 Address:** A text field displaying '192.168.30.44'.
- Subnet Mask:** A text field displaying '255.255.255.0'.
- Default Gateway:** A text field displaying '192.168.30.1'.

IPv6 Configuration:

- IPv6 Settings:** A checkbox labeled 'Enable' which is unchecked.
- Obtain an IP address automatically:** A checkbox labeled 'Use DHCP' which is unchecked.
- IPv6 Address:** A text field displaying ':-'.
- Subnet Prefix length:** A text field displaying '0'.
- Default Gateway:** A text field displaying ':-'.

VLAN Configuration:

- VLAN Settings:** A checkbox labeled 'Enable' which is unchecked.

This page is used to configure the network settings for available LAN channels.

LAN Interface

Select the LAN interface to be configured.

LAN Settings

Check this option to enable LAN support for the selected interface.

MAC Address

This field displays the MAC address of the selected interface (read only).

IPv4 Configuration

It lists the IPv4 configuration settings.

Obtain an IP address automatically

Enable 'Use DHCP' to dynamically configure the IPv4 address using Dynamic Host Configuration Protocol (DHCP).

IPv4 Address, Subnet Mask, Default Gateway

If DHCP is disabled, specify a static IPv4 address, Subnet Mask and

Default Gateway to be configured for the selected interface.

- An IP Address consists of 4 sets of numbers separated by dots as in "xxx.xxx.xxx.xxx".
- Each set ranges from 0 to 255.
- The first Number must not be 0.

IPv6 Configuration

It lists the IPv6 configuration settings.

IPv6 Settings

Check this option to enable IPv6 support for the selected interface.

Obtain an IP address automatically

Enable 'Use DHCP' to dynamically configure the IPv4 address using Dynamic Host Configuration Protocol (DHCP).

IPv6 Address

Specify a static IPv6 address to be configured for the selected interface.

Subnet Prefix length

Specify the subnet prefix length for the IPv6 settings.

- Value ranges from 0 to 128.

Default Gateway

Specify the v6 default gateway for IPv6 settings.

VLAN Configuration

It lists the VLAN configuration settings.

VLAN Settings

Check this option to enable VLAN support for the selected interface.

VLAN ID

Specify the Identification for VLAN configurations.

- Value ranges from 2 to 4094.

NOTE: VLAN ID cannot be changed without resetting the VLAN configuration.

VLAN ID 0, 1, 4095 are reserved VLAN ID's.

VLAN Priority

Specify the priority for VLAN configurations.

- Value ranges from 1 to 7.

NOTE: 7 is the highest priority for VLAN.

Save

Click 'Save' to save any changes made. You will be prompted to log out of the current UI session and log back in at the new IP address.

Reset

Click 'Reset' to reset the modified changes.

2.5.8 Network Bonding Configuration

The screenshot shows the ASRock Rack American Megatrends BIOS interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration (selected), Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The main title is "Network Bonding Configuration". Below it, a note states: "The following options are to configure networking bonding for the device." The configuration options are: "Network Bonding" with a checked checkbox and "Enable" text; "Default Interfaces" with a dropdown menu showing "both"; and "Auto Configuration" with a checked checkbox and "Enable" text. At the bottom right, there are "Save" and "Reset" buttons.

This page is used to configure the network bonding configuration for network interfaces.

NOTE: A minimum of 2 network interfaces are required to enable Network bonding for the device.

Network Bonding

Check this option to enable network bonding for network interfaces.

NOTE: If VLAN is enabled for slave interfaces, then Bonding cannot be enabled. VLAN can be disabled under Configuration -> Network -> VLAN.

Default Interfaces

Choose any one of the bonding interfaces for configuring active slave(s).

Auto Configuration

Enable this option to configure the interfaces in service configuration automatically.

NOTE: If Auto configuration is disabled, then interfaces in services can be configured via IPMI command. If Auto configuration is enabled, then all the services will be restarted automatically.

Save

Click "Save" to save the current changes.

NOTE: Disabling bonding will disable the Bonding-VLAN configuration.

Reset

Click “Reset” to reset the modified changes.

2.5.9 Network Link Configuration

2.5.10 NTP Settings

ASRock Rack American Megatrends

admin (Administrator) Refresh Print Logout

Dashboard FRU Information Server Health **Configuration** Remote Control Auto Video Recording Maintenance Firmware Update HELP

NTP Settings

Here you can either configure the NTP server or view and modify the device's Date & Time settings.

Date: March 3 2014

Time: (hh:mm:ss) 11 52 49

UTC Timezone: (GMT+/-0) Hour(s)

NTP Server: pool.ntp.org

☒ Automatically synchronize Date & Time with NTP Server

Refresh Save Reset

This page displays the device's current Date & Time Settings. It can be used to configure either Date & Time or NTP (Network Time Protocol) server settings for the device.

Date

Specify the current Date for the device.

Time

Specify the current Time for the device.

NOTE: As a year 2038 problem exists, the acceptable date range is from 01-01-2005 to 01-18-2038.

NTP Server

Specify the NTP Server for the device. Check the 'Automatically synchronize' option to configure the NTP Server. The NTP Server will support the following:

- IP Address (Both IPv4 and IPv6 format).
- FQDN (Fully qualified domain name) format.

UTC Offset

UTC Offset list contains the UTC offset values for the NTP server, which can be used to display the exact local time.

NOTE: Use the correct UTC offset after adjusting for DST.

Automatically synchronize

Check this option to automatically synchronize Date and Time with the NTP Server.

Refresh

Click 'Refresh' to reload the current date & time settings.

Save

Click 'Save' to save any changes made.

Reset

Click 'Reset' to reset the modified changes.

2.5.11 PAM Ordering

The screenshot shows the iSRock Rack web interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The user is logged in as 'admin (Administrator)'. The main content area is titled 'PAM Ordering' and contains a sub-header: 'This page is used to configure the PAM Ordering for the user authentication.' Below this, there is a list of PAM modules: 'IPMI', 'LDAP', and 'Active Directory'. To the right of the 'LDAP' module are two buttons: 'Move Up' (upward arrow) and 'Move Down' (downward arrow). At the bottom right of the page are 'Save' and 'Reset' buttons.

This page is used to configure the PAM order for user authentication into the BMC.

PAM Module

It shows the list of available PAM modules supported in BMC.

Move Up

Click on the required PAM module, it will be selected. Click on the 'Move Up' option to move the selected PAM module one step before the existing PAM module.

Move Down

Click on the required PAM module, it will be selected. Click on the 'Move Down' option to move the selected PAM module one step after the existing PAM module.

Save

Click 'Save' to save any changes made.

NOTE: Whenever the configuration is modified, the web server will be restarted automatically. The logged session will be logged out.

Reset

Click 'Reset' to reset the modified changes.

2.5.12 PEF Management

admin (Administrator) Refresh Print Logout

DashboardFRU InformationServer HealthConfigurationRemote ControlAuto Video RecordingMaintenanceFirmware UpdateHELP

PEF Management

Use this page to configure Event Filter, Alert Policy and LAN Destination. To delete or modify a entry, select it in the list and press "Delete" or "Modify". To add a new entry, select an unconfigured slot and press "Add".

Event FilterAlert PolicyLAN Destination

Configured Event Filter count: 13

PEF ID	Filter Configuration	Event Filter Action	Event Severity	Sensor Name
1	~	~	~	~
2	~	~	~	~
3	Enabled	[Alert]	Unspecified	Any
4	Enabled	[Alert]	Unspecified	Any
5	Enabled	[Alert]	Unspecified	Any
6	Enabled	[Alert]	Unspecified	Any
7	Enabled	[Alert]	Unspecified	Any
8	Enabled	[Alert]	Unspecified	Any
9	Enabled	[Alert]	Unspecified	Any
10	Enabled	[Alert]	Unspecified	Any
11	Enabled	[Alert]	Unspecified	Any
12	Enabled	[Alert]	Unspecified	Any
13	Enabled	[Alert]	Unspecified	Any
14	Enabled	[Alert]	Unspecified	Any
15	Enabled	[Alert]	Unspecified	Any
16	~	~	~	~

AddModifyDelete

This page is used to configure the Event Filter, Alert Policy and LAN Destination. To view the page, the user must at least be an Operator. To modify or add a PEF, the user must be an Administrator.

NOTE: Free slots are denoted by '~' in all columns for the slot. For more information, refer the Platform Event Filtering (PEF) section in IPMI Specification.

Event Filter

Click the Event Filter tab to show configured Event filters and available slots. You can modify or add new event filter entries here. A maximum of 40 slots are available and include the default of 15 event filter configurations.

Alert Policy

Click the Alert policy tab to show configured Alert policies and available slots. You can modify or add new alert policy entries here. A maximum of 60 slots are available.

LAN Destination

Click the LAN Destination tab to show configured LAN destinations and available slots. You can modify or add new LAN destination entries here. A maximum of 15 slots are available.

Send Test Alert

Select a configured slot in the LAN Destination tab and click 'Send Test Alert' to send a sample alert to the configured destination.

NOTE: Test alerts can be sent only with SMTP configurations set to enabled. SMTP support can be enabled under Configuration->SMTP.

Add

Select a free slot and click 'Add' to add a new entry to the device. Alternatively, double click on a free slot.

Modify

Select a configured slot and click 'Modify' to modify that entry. Alternatively, double click on the configured slot.

Delete

Select the desired configured slot to be deleted and click 'Delete'.

2.5.13 RADIUS Settings

RADIUS Settings

Check the box below to enable RADIUS authentication and enter the required information to access the RADIUS server. Press the Save button to save your changes.

RADIUS Authentication ☐ Enable

Port

Time Out seconds

Server Address

Secret

To enable/disable RADIUS, check or uncheck the “RADIUS Authentication” Enable checkbox respectively.

NOTE: Generic FreeRADIUS alone is supported.

RADIUS Authentication

Check the option ‘Enable’ to enable RADIUS authentication.

Port

Specify the RADIUS Port.

- The default Port is 1812.
- Port value ranges from 1 to 65535.

Time Out

Specify the Time out value.

- The default Time out value is 3 seconds.
- Time out value ranges from 3 to 300.

Server Address

Enter the ‘IP address’ of the RADIUS server

- An IP Address is made of 4 numbers separated by dots as in “xxx.xxx.xxx.xxx”.
- Each Number ranges from 0 to 255.
- The first Number must not be 0.

The server address will support the following:

- IPv4 Address format.
- IPv6 Address format.

Secret

Enter the 'Authentication Secret' for RADIUS server

- Secret must be at least 4 characters long.
- Space is not allowed.

NOTE: This field will not allow more than 31 characters.

Save

Click 'Save' to save the settings.

Reset

Click 'Reset' to reset the modified changes.

2.5.14 Configure Remote Session

ASRock Rack American Megatrends

Dashboard FRU Information Server Health Configuration Remote Control Auto Video Recording Maintenance Firmware Update HELP

Configure Remote Session

This page is used to configure virtual media configuration settings for the next redirection session.

Virtual Media Attach Mode

Save Reset

This page is used to configure virtual media configuration settings for the next redirection session.

Virtual Media Attach Mode

Two types of VM attach modes are available:

- Attach - Immediately attaches Virtual Media to the server upon bootup.
- Auto Attach - Attaches Virtual Media to the server only when a virtual media session is started.

Save

Click 'Save' to save the current changes.

NOTE: It will automatically close the existing remote redirection either KVM or Virtual media sessions, if any.

Reset

Click 'Reset' to reset the modified changes.

2.5.15 Services

admin (Administrator) Refresh Print Logout

DashboardFRU InformationServer HealthConfigurationRemote ControlAuto Video RecordingMaintenanceFirmware UpdateHELP

Services

Below is a list of services running on the BMC. It shows current status and other basic information about the services. Select a slot and press "Modify" button to modify the services configuration.

Number of Services: 7

#	Service Name	Current State	Interfaces	Nonsecure Port	Secure Port	Timeout	Maximum Sessions	Active Sessions
1	web	Active	bond0	80	443	1800	20	5
2	lvm	Active	bond0	7578	7582	N/A	2	0
3	cd-media	Active	bond0	5120	5124	N/A	1	0
4	ls-media	Active	bond0	5122	5126	N/A	1	0
5	hd-media	Active	bond0	5123	5127	N/A	1	0
6	ssh	Active	N/A	N/A	22	600	N/A	N/A
7	telnet	Active	N/A	23	N/A	600	N/A	N/A

Modify

This page is used to display the basic information about services running in the BMC. To modify a service, the user must be an Administrator.

Modify

Select a slot and click 'Modify' to modify the configuration of the service. Alternatively, double click on the slot.

NOTE: Whenever the configuration is modified, the service will be restarted automatically. Users have to close the existing opened session for the service if needed.

2.5.16 SMTP Settings

ASRock Rack American Megatrends

Dashboard FRU Information Server Health **Configuration** Remote Control Auto Video Recording Maintenance Firmware Update HELP

SMTP Settings

Manage SMTP settings of the device.

LAN Channel Number:

Sender Address:

Machine Name:

Primary SMTP Server

SMTP Support: ☒ Enable

Server Address:

☐ SMTP Server requires Authentication

Password:

Secondary SMTP Server

SMTP Support: ☒ Enable

Server Address:

☐ SMTP Server requires Authentication

User Name:

Password:

This page is used to configure the SMTP settings.

LAN Channel Number

Select the LAN channel to which the SMTP information needs to be configured.

Sender Address

Enter the 'Sender Address' valid on the SMTP Server.

Machine Name

Enter the 'Machine Name' of the SMTP Server.

- Machine Name is a string of maximum 15 alpha-numeric characters.
- Space, special characters are not allowed.

Primary SMTP Server

It lists the Primary SMTP Server configuration.

SMTP Support

Check this option to enable SMTP support for the BMC.

Server Address

Enter the 'IP address' of the SMTP Server. It is a mandatory field.

- An IP Address is made of 4 numbers separated by dots as in "xxx.xxx.xxx.xxx".
- Each Number ranges from 0 to 255.
- The first Number must not be 0.

The server address will support the following:

- IPv4 Address format.
- IPv6 Address format.

SMTP Server requires Authentication

Check the option 'Enable' to enable SMTP Authentication.

Note: SMTP Server Authentication Types supported are:

- CRAM-MD5
- LOGIN
- PLAIN

If the SMTP server does not support any one of the above authentication types, the user will get an error message stating, "Authentication type is not supported by SMTP Server"

Username

Enter the username to access SMTP Accounts.

- The User Name can be 4 to 64 alpha-numeric characters.
- It must start with an alphabet.
- Special characters ',' (comma), ':' (colon), ';' (semicolon), ' ' (space) and '\' (backslash) are not allowed.

Password

Enter the password for the SMTP User Account.

- Passwords must be at least 4 characters long.
- Space is not allowed.

NOTE: This field will not allow more than 64 characters.

Secondary SMTP Server

It lists the Secondary SMTP Server configuration. It is an optional field. If the Primary SMTP server is not working, then it tries the Secondary SMTP Server configuration.

Save

Click 'Save' to save the new SMTP server configuration.

Reset

Click 'Reset' to reset the modified changes.

2.5.17 SSL Certificate Configuration

ASRock Rack American Megatrends

Dashboard FRU Information Server Health **Configuration** Remote Control Auto Video Recording Maintenance Firmware Update HELP

SSL Certificate Configuration

This page is used to configure SSL certificate into the BMC. Using this, the device can be accessed in a secured mode. Upload SSL option is used to upload the certificate and private key file into the BMC. Generate SSL option is used to generate the SSL certificate based on configuration details. View SSL option is used to view the uploaded SSL certificate in readable format.

Upload SSL Generate SSL View SSL

New Privacy Key 浏览

Upload

This page is used to upload a new SSL certificate and privacy key.

NOTE: Please check the current BMC time in NTP under the Configuration menu while uploading the SSL certificate.

Current Certificate

The current certificate, uploaded date/time information will be displayed (read only).

New Certificate

Browse and navigate the certificate file.

- The certificate file should be of pem type

Current Privacy Key

The current privacy key, uploaded date/time information will be displayed (read only).

New Privacy Key

Browse and navigate the privacy key file.

- The privacy key file should be of pem type

Upload

Click 'upload' to upload the SSL certificate and privacy key into the BMC.

NOTE: Upon successful upload, HTTPs service will be restarted to use the newly uploaded SSL certificate.

2.5.18 System and Audit Log Settings

The screenshot shows the ASRock Rack American Megatrends web interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The user is logged in as 'admin (Administrator)'. The 'System and Audit Log Settings' page is displayed, featuring a sub-header that reads: 'Enable and configure logging of system events below. Or you can enable/disable logging of audit events. Press the Save button to save your changes.' The settings are organized into two sections: 'System Log' and 'Audit Log'. In the 'System Log' section, the 'Enable' checkbox is checked. The 'Log Type' is set to 'Local Log' (selected with a radio button), with 'Remote Log' as an alternative. The 'File Size (in bytes)' is set to '50000' in a text input field. The 'Rotate Count' is set to '0' in another text input field. The 'Server Address' is shown as an empty text input field. In the 'Audit Log' section, the 'Enable' checkbox is also checked. At the bottom right of the form, there are 'Save' and 'Reset' buttons.

System Log	☒ Enable
Log Type	☒ Local Log ☐ Remote Log
File Size (in bytes)	<input type="text" value="50000"/>
Rotate Count	<input type="text" value="0"/>
Server Address	<input type="text"/>
Audit Log	☒ Enable

Save Reset

This page is used to configure the System and Audit log settings.

System Log

Check the option 'Enable' to enable system logs.

Log Type

Select the Log type for system logs, whether it should be preserved in a local file or on a remote server. Local file resides at `/var/log/`.

File Size

If Local log is selected, specify the size of the file in bytes.

- Size ranges from 3 to 65535.

Rotate Count

When logged information exceeds the specified file size, the old log information automatically gets moved to backup files based on the rotate count value. If the rotate count is zero, the old log information gets cleared permanently each time.

- Value ranges from 0 to 255.

Server Address

Specify the remote server address to log system events. The server address will support the following:

- IP Address (Both IPv4 and IPv6 format).
- FQDN (Fully qualified domain name) format.

Audit Log

Check the option 'Enable' to enable audit log.

Save

Click 'Save' to save the configured settings.

Reset

Click 'Reset' to reset to the previously saved values.

2.5.19 User Management

The screenshot displays the 'User Management' page of the ASRock Rack web interface. The page header includes the ASRock Rack logo and the American Megatrends logo. The navigation bar contains links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The main content area shows a table of users. The table has five columns: UserID, Username, User Access, Network Privilege, and Email ID. The first two rows are populated with 'anonymous' and 'admin' users. The remaining eight rows are empty, indicated by '~' in all columns. Below the table are buttons for 'Add User', 'Modify User', and 'Delete User'.

UserID	Username	User Access	Network Privilege	Email ID
1	anonymous	Disabled	Administrator	~
2	admin	Enabled	Administrator	~
3	~	~	~	~
4	~	~	~	~
5	~	~	~	~
6	~	~	~	~
7	~	~	~	~
8	~	~	~	~
9	~	~	~	~
10	~	~	~	~

Number of configured users: 2

Add User Modify User Delete User

The displayed table shows any configured Users and available slots. You can modify or add new users from here. A maximum of 10 slots are available, including the default admin and anonymous. It is advised that the anonymous user's privilege and password should be modified as a security measure. To view the page, you must have Operator privileges. To modify or add a user, You must have Administrator privileges.

NOTE: Free slots are denoted by “~” in all columns for the slot.

Add User

Select a free slot and click 'Add User' to add a new user to the device. Alternatively, double click on a free slot to add a user.

Modify User

Select a configured slot and click 'Modify User' to modify that user. Alternatively, double click on the configured slot.

Delete User

Select the desired user to be deleted and click 'Delete User'.

2.5.20 Virtual Media Devices

The screenshot shows the ASRock Rack American Megatrends BIOS interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The 'Configuration' tab is selected. Below the navigation bar, the 'Virtual Media Devices' section is displayed. It contains a message: 'The following option will allow to configure virtual media devices.' followed by four settings: 'Floppy devices' (set to 1), 'CD/DVD devices' (set to 1), 'Harddisk devices' (set to 1), and 'SD Media Support' (checked and labeled 'Enable'). At the bottom right of the configuration area are 'Save' and 'Reset' buttons.

Floppy devices	1
CD/DVD devices	1
Harddisk devices	1
SD Media Support	☒ Enable

Save Reset

Use this page to configure Virtual Media device settings.

Floppy devices

Select the number of floppy devices that support Virtual Media redirection.

CD/DVD devices

Select the number of CD/DVD devices that support Virtual Media redirection.

Hard disk devices

Select the number of hard disk devices that support Virtual Media redirection.

SD Media Support

Check this option to enable SD Media support in BMC.

Save

Click 'Save' to save the configured settings.

Reset

Click 'Reset' to reset the previously-saved values.

2.6 Remote Control

2.6.1 Console Redirection

Launch the remote console redirection window from this page. To launch it, you must have Administrator privileges.

NOTE: A compatible JRE must be installed in the system prior to the launch of the JNLP file.

Java Console

Click 'Java Console' which will cause the `jviewer.jnlp` file to be downloaded. Once the file is downloaded and launched, a Java redirection window will be displayed.

2.6.2 Power Control and Status

The screenshot shows the 'Power Control and Status' page in the ASRock Rack American Megatrends BIOS/UEFI. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The main content area displays the current server power status as 'Host is currently on'. Below this, there are five radio button options: 'Reset Server' (selected), 'Power Off Server - Immediate', 'Power Off Server - Orderly Shutdown', 'Power On Server', and 'Power Cycle Server'. A 'Perform Action' button is located at the bottom right of the page.

This page helps you to view or perform any host power cycle operations.

Reset Server

Select this option to reboot the system without powering off (warm boot).

Power Off Server - Immediate

Select this option to immediately power off the server.

Power Off Server - Orderly Shutdown

Select this option to initiate operating system shutdown prior to the shutdown.

Power On Server

Select this option to power on the server.

Power Cycle Server

Select this option to first power off, and then reboot the system (cold boot).

Perform Action

Click 'Perform Action' to perform the selected option.

2.6.3 Java SOL

Launch the Java SOL, you must have Administrator privileges.

NOTE: A compatible JRE must be installed in the system prior to the launch of the JNLP file.

2.7 Auto Video Recording

2.7.1 Triggers Configuration

DashboardFRU InformationServer HealthConfigurationRemote ControlAuto Video RecordingMaintenanceFirmware UpdateHELP

Triggers Configuration

This page allows the user to configure which events will trigger the auto video recording function of the KVM server

2.9 Firmware Update

2.9.1 Firmware Update

DashboardFRU InformationServer HealthConfigurationRemote ControlAuto Video RecordingMaintenanceFirmware UpdateHELP

Firmware Update

Upgrade firmware of the device. Press "Enter Update Mode" to put the device in update mode.

The protocol information to be used for firmware image transfer during this update is as follows. To configure, choose 'Image Transfer Protocol' under Configuration menu.
Protocol Type : HTTP/HTTPS

WARNING: Please note that after entering update mode widgets, other web pages and services will not work. All open widgets will be closed automatically. If upgrade process is cancelled in the middle of the wizard, the device will reset.

☐ Preserve all Configuration. This will preserve all the configuration settings during the firmware update - irrespective of the individual items marked as preserve/overwrite in the table below. All configuration items below will be preserved by default during a restore factory default operation. Click "Enter Preserve Configuration" to modify the Preserve status settings.

#	Preserve Configuration Item	Preserve Status
1	SDR	Overwrite
2	FRU	Overwrite
3	SEL	Overwrite
4	IPMI	Overwrite
5	Network	Overwrite
6	NTP	Overwrite
7	SNMP	Overwrite
8	SSH	Overwrite
9	KVM	Overwrite
10	Authentication	Overwrite

Enter Preserve ConfigurationEnter Update Mode

This wizard takes you through the process of firmware upgrades. A reset of the box will automatically follow whether the upgrade is completed or cancelled. An option to Preserve configuration will be presented. Enable the option, if you wish to preserve configured settings through the upgrade.

Enter Preserve Configuration

Click this to redirect to the Preserve configuration page, which is used to preserve the particular configurations not to be overwritten by the default configuration.

Enter Update Mode

Click 'Enter Update Mode' to upgrade the current device firmware.

2.9.2 Image Transfer Protocol

The screenshot shows the ASRock Rack web interface. The top navigation bar includes links for Dashboard, FRU Information, Server Health, Configuration, Remote Control, Auto Video Recording, Maintenance, Firmware Update, and HELP. The main content area is titled 'Image Transfer Protocol'. Below the title, a note states: 'The following option will allow to configure firmware image protocol information.' The configuration fields are: Protocol Type (a dropdown menu currently showing 'HTTP/HTTPS'), Server Address (a text input field), Source Path (a text input field), and Retry Count (a numeric input field currently showing '0'). At the bottom right of the form are 'Save' and 'Reset' buttons.

This page is used to configure the firmware image protocol information.

Protocol Type

Protocol type to transfer the firmware image into the BMC.

Server Address

The Server IP address of the firmware image is stored.

- An IP Address is made of 4 numbers separated by dots as in "xxx.xxx.xxx.xxx".
- Each number ranges from 0 to 255.
- The first number must not be 0.

Source Path

Full Source path with filename of where the firmware image is stored.

Retry Count

Number of time(s) to be retried when transfer failure occurs. Retry count ranges from 0 to 255.

Save

Click 'Save' to save the configured settings.

Reset

Click 'Reset' to reset the modified changes.
